THE LATEST SNAPSHOT

More useful journeys. A clearer point of view.

Recent work expands the site beyond a portfolio into a more rounded studio platform: deeper service and editorial content, a stronger studio story, improved discovery and more consistent interactions.

RECENT COMMITS	FILES TOUCHED	LINES ADDED	CORE WORKSTREAMS

EXECUTIVE SUMMARY

The most meaningful gains are the new **Insights** experience, dedicated **capability detail pages**, a more structured **Studio** story and foundational **SEO improvements**. Portfolio, navigation and animation refinements bring the new and existing journeys into closer alignment.

01 / CONTENT

Insights, from archive to article

Added a browsable, category-filtered Insights archive and individual article pages, backed by structured content and direct routes. Studio Notes now points into the editorial experience.

02 / SERVICES

Deeper capability journeys

Added dedicated capability detail pages and refined the service grid, giving visitors a clearer path from the overview to individual offerings.

03 / STUDIO

A more considered studio story

Reworked the Studio page around distinct environment, process and work sections, alongside refreshed team data and profile content.

04 / DISCOVERY

Search and sharing foundations

Added route-aware SEO titles and descriptions, canonical and Open Graph metadata, plus sitemap and robots files. Hosting rewrites preserve those files for crawlers.

05 / WORK & ENQUIRIES

Clearer portfolio-to-contact paths

Refined project cards, the work grid and case-study layouts; improved internal navigation and added a reusable floating project CTA across relevant pages.

06 / EXPERIENCE

More consistent interaction and polish

Consolidated motion and pointer behavior across key screens, and made a series of responsive layout, hierarchy, legibility and markup cleanups.

WHAT LANDED MOST RECENTLY

Final refinements, with a few checks to close.

The latest commits focus on consistency and legibility, following a broader round of page and interaction work.

12 OCT	**Case studies and footer.** Tuned the case-study back-link destination and button styling, improved text visibility, and removed redundant footer data attributes.
11 OCT	**Team and home-page type.** Refined team data and removed obsolete profile assets; simplified unnecessary tracking classes in the hero text.
09 OCT	**Motion and pointer behavior.** Updated shared animation and pointer patterns across capabilities, branding, contact, studio and project surfaces.

Recommended before external release

The project data identifies itself as mock content and includes example.com destinations. Please confirm final client copy, media, credits and every public-facing project link before presenting the live site externally.

- Approve the Insights and capability copy, including article imagery and the service naming hierarchy.
- Walk the key mobile journeys: work → case study, service → detail, and CTA → project enquiry.
- Confirm route metadata, canonical URLs and sitemap coverage for the final set of public pages.

Production build · Passed

Vite compiled 539 modules successfully. The generated JavaScript bundle is 580 kB minified; Vite flags bundles above 500 kB for potential code-splitting review.

Lint · Follow-up needed

ESLint currently reports 35 errors across the repository, including unused imports/variables and React effect-state findings. The build succeeds, but lint is not clean.

Scope: repository history from 35d1e7a through 1ce5570 (18 commits, 02–12 Oct 2026). Change totals are from the aggregate Git diff. This report summarizes committed changes; it is not a content or QA sign-off.
